
Recovered geometry vs. query-set composition · diluted with dolly (en, instructions)
columns are yahoo % of the 100-row probe · rings = pooled fit (distances averaged, then embedded) · filled = mean location over aligned per-seed fits
faint points = the 10 per-seed fit(s), Procrustes-aligned to the pooled one · triangles = the simplex frame (pure g1 north, pure g2 east) · behavioral: greedy, R=1 deterministic
